Claims 12 and 13 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Tsuzuki et al.

Tsuzuki et al teach a system, including: vehicle with a "clutch" (col. 16, line 63), the clutch including frictional members that are lubricated; and a means to measure the "slipping speed of the friction member" (col. 16, line 65). The measurement is used to calculate coefficient of friction of the member.

As to claim 12, while Tsuzuki does not expressly refer to a "housing" for the clutch, clutches employ housings to both protect the clutch from the environment and keep lubricant about the clutch. The phrase "for determining the current state of a lubricant" is a statement of intended use, especially when contrasted with claim 1 which substantively employs an actual comparison with reference values. In the alternative, a numerical value of coefficient of friction may be deemed to be indicative of a current state of the lubricant.

As to claim 13, vehicles include displays for many reasons, including a hot temperature indicator, rpm, speedometer, etc.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tsutsui et al relate slippage to "change in the viscous resistance" (col. 3, line 25) of oil. However, Tsutsui et al neither teach use of a reference/comparison to determine a current state in a vehicle during use (as in claims 1 and 11), nor use of two speed sensors (as in claim 12).
